THE NEED FOR SMARTER ACCESS MANAGEMENT

How SMBs can reduce risks with Privileged Access Management (PAM) & End-User Access Management (EUAM)

ACCESS

Common Challenges Without PAM or EUAM

Shared or Weak Passwords

- Staff reuse logins or share credentials across tools.
- Risk: Easy target for hackers.

Too Many Privileged Accounts

- Admin rights given "just in case" and never revoked.
- Risk: Insider misuse or credential theft.

Growing Attack Surface

- Remote work, cloud apps, and multiple devices expand access points.
- Risk: One weak entry point = full compromise.

No Visibility or Audit Trails

- SMBs don't know who accessed what, and when.
- Risk: Hard to detect breaches or prove compliance.

Key Benefits of PAM and EUAM

✓ **Protect Privileged Accounts**
Enforce least privilege, vault credentials, rotate passwords automatically.

✓ **Simplify End-User Access**
Enable single sign-on (SSO), MFA, and automated onboarding/offboarding.

✓ **Reduce Breach Risk**
Limit the attack surface by ensuring users only get the access they need.

✓ **Visibility & Control**
Centralized logs and reports for compliance and auditing.

✓ **Boost Productivity**
Fewer login issues, smoother access to the tools employees need.

OPTIMIZE & REINFORCE YOUR ACCESS MANAGEMENT TODAY
